My wife's 1995 Mazda Miata engine has always had a bit of a "tapping" sound much like a valve lifter. I have been told her vehicle does not have mechanical lifters that are adjustable. Recently the vehicle overheated due to a broken lower radiator hose and the "tapping" is more pronounced than it was before.

A low or rough idle on a Air Flow Meter style engine can be cause by any vacuum leaks in the intake. When air enters the engine that hasn't passed through the AFM the engine doesn't know its there and will run lean. For very small leaks I believe it is possible for the car to adapt to the extra air entering over time and increase the fuel delivery on idle, thus leading to a high idle.
