course. The first idea is that we can construct representations of relationships between two sets of quantities and that these representations, which we call functions, have common traits. The second idea is that we can use these relationships between the quantities, which we call variables, to use our knowledge of the value of one variable to predict or determine explicitly the value of the other variable.

Illustrative Mathematics Algebra 1, Unit 1 - Families ...

An equation that contains only one unknown quantity or one quantity that can vary is called an equation in one variable.. For example, the equation $2\ell + 2w = 72$ represents the relationship between the length, ℓ , and the width, w , of a rectangle that has a perimeter of 72 units.If we know that the length is 15 units, we can rewrite the equation as:

Illustrative Mathematics Algebra 1, Unit 2.4 - Students

The purpose of this unit is to create a bridge between students' understanding of equations in one variable and equations in two variables. The focus of instruction is on using algebra as a tool

Unit Overview. Functions are used to model and analyze quantitative relationships in real-world applications. In this unit, students deepen their understanding of functions by investigating piecewise, step, absolute value, and inverse functions. Students extend their understanding of function notation by adding, subtracting, multiplying, and dividing functions, and determining the composition of functions.

Unit 1 of Algebra I builds on these earlier experiences by asking students to analyze and explain the process of solving an equation, to reason quantitatively, and use units to solve problems. Students develop fluency writing, interpreting, and translating between various forms of linear equations and inequalities in both one and two variables, and use them to solve problems.
