Shale oil extraction is an industrial process for unconventional oil production. This process converts kerogen in oil shale into shale oil by pyrolysis, hydrogenation, or thermal dissolution.The resultant shale oil is used as fuel oil or upgraded to meet refinery feedstock specifications by adding hydrogen and removing sulfur and nitrogen impurities.

Shale oil extraction - Wikipedia

Shale oil, such as what comes from the Bakken in North Dakota and southeast Saskatchewan, is oil produced from "tight" shale formations of rock. In the case of the Bakken, this is considered the "source rock," where that oil originated, but it is deep and hot enough in the North Dakota "kitchen" to have "cooked" those kerogens into oil.
