submitted and maintained content. While you won't technically find free books on this site, at the time of this writing, over 200,000 pieces of content are available to read.

Sponges And Cnidarians Webquest Answer

Sponges differ from all other marine invertebrates in that they have no true tissues or organs. Their structure is composed of simple groups of cells. In spite of what cartoonists continue to portray as a real living sponge - Sponge Bob is NOT a real sponge - sadly he is a synthetic sponge and does not show the true characteristics of a real sponge.

Sponges And Cnidarian Webquest Answers

Cnidarians. The phylum Cnidaria includes animals that show radial or biradial symmetry and are diploblastic. Nearly all (about 99 percent) cnidarians are marine species. Cnidarians have specialized cells known as cnidocytes (“stinging cells”) containing organelles called nematocysts. These cells are concentrated around the mouth and tentacles of the animal and can immobilize prey with toxins.
