Chapter 6 Geography Flashcards | Quizlet

The environment in Western Sahara is extremely hot and causes the water to evaporate quickly. Also the population is quite poor and can't afford clean water. 2. In Western Sahara there are very few rivers and lakes to contain water this means that the village people will have to travel very far to get water, and have to carry it back on their head or they have to buy water which is very expensive.

Water Scarcity in Western Sahara

Beneath the sands of the Sahara Desert scientists have discovered evidence of a prehistoric megalake. Formed some 250,000 years ago when the Nile River pushed through a low channel near Wadi Tushka, it flooded the eastern Sahara, creating a lake that at its highest level covered more than 42,000 square miles.
